Fabric Cleaning Kit CP7602

The TwenTec Fabric Cleaning Kit CP7602 is built around the new TwenTec Twister Gun. This air-operated Spray-Gun vaporizes the special TwenTec cleaning liquid and sprays it under pressure on to the fabric parts to be cleaned. The innovative nozzle design creates a tornado-like turbulence, which optimizes the cleaning properties of the liquid. The result : a very thorough cleaning of fabric parts in the car interior. Loose mats can be treated as well with the same amazing results.

After the treatment the TwenTec Twister Gun can be used to dry the cleaned areas with air.

The TwenTec cleaning liquid is a concentrate, which should be diluted with water, and which therefore is very economical in usage.

For maximum performance the TwenTec Twister Gun requires a constant air pressure of 5-8 bar.

The high nozzle wear, that was typical for this type of guns, now belongs to the past due to the new nozzle design which eliminates direct contact between rotor and nozzle.
