WPT Screw-On Tool Sets

The new WPT Screw-On Tool Sets contain a number of special Dent Repair Tools with plastic tips along with some sets of 3 differently shaped tips.

The tools vary in diameter and length in such a way that a wide range of dent repair jobs can be accomplished.

The plastic tips ensure that during the repair process the painted surfaces remain scratch-free, which can be of importance in view of Corrosion Warranty claims.

The plastic tips are screwed on to the tools to provide a solid connection.

Tip Set
