WPT Silver Edition Dent Repair Glue Kits

The Glue method has been added to the WPT Dent Repair program for two reasons :

- to create a low-cost introduction package for newcomers to the Dent Repair business.
- to offer a supplement to the users of Dent Repair Tool systems. Small dents that cannot be reached from the inside, now can be repaired from the outside with the Glue method without damaging the paint.

The repair method is simple :

a Glue Tab is bonded to the center of the dent with a special glue. With the help of the WPT Dent Puller the dent can be pulled out in a fluent, controlled way. The progress of the repair job can be checked similar to the Tool method by watching the reflection lines on the panel from a fluorescent light source.

P/N	Description
