WPT Dent Repair Lights with Suction Cup Base

It is strongly recommended to always use an appropriate fluorescent light at Paintless Dent Repair jobs.

The reflection lines created by such a light around the dent, makes it much easier to determine where exactly the Dent Repair Tool or the Dent Repair Glue Tab should be positioned as well as to monitor the progress of the repair job.

WPT-TwenTec Automotive BV offers four PDR-Lights with a suction cup base. Both 12 Volt and 220 Volt versions are available.

For the same purpose we also supply two large Light Stands (info sheet CR-1-62).

P/N	Description
6538	Mini-Light with Suction Cup Base, 220 Volt
6548	Dent-Light with Suction Cup Base, 220 Volt
6535	Stubby Light with Suction Cup Base, 12 Volt
