TwenTec Dent Lifter Kits

Dent Lifting has been added to the TwenTec Dent Repair programme for two reasons :

- to create a low-cost introduction package for newcomers to the Dent Repair business.
- to offer a supplement to the users of the Dent Repair Tool Kits. Small dents that cannot be reached from the inside, now can be repaired from the outside with Dent Lifting without damaging the paint.

The repair method is simple : a Glue Tab is bonded to the center of the dent with a special glue. With the help of the TwenTec Dent Lifter the dent can be pulled out in a fluent, controlled way. The progress of the repair job can be checked similar to the Tool method by watching the reflection lines from a fluorescent light source.

Dent Lifter 6013
