Hand Puller

The Hand Puller is an worthwhile supplement to the WPT and TwenTec Dent Repair Slide Hammer programs.

It is designed especially for the repair of large amounts of small hail dents, where the standard slide hammer is a too heavy tool.

But the Hand Puller will come in handy as well for the repair of large, shallow dents and for keeping tension in the panel at traditional panel-beating jobs.

Two versions are available :

- short (overall length 15 cm)
- long (overall length 25 cm)

P/N	Description
6069	Hand Puller (short)
6071	Hand Puller (long)
