TwenTec Plastic Stapling Kit

The new TwenTec Plastic Stapling Kit allows you to repair damaged plastic parts in an easy and economical way. The special staples that are imbedded in the plastic material produce a strong bond with extra strength.

The stapling repair method was initially developed for the automotive market to repair cracks in bumpers and broken tabs, but today it is also used for a wide range of repairs in the industrial market.

There is no need to first identify the type of plastic, as the stapling method works with all sorts of plastics.

The kits contains in total 600 staples (as listed below). With the variation in shapes and diameters a wide range of repairs can be carried out.
