System 3000 Sterilizer

The System 3000 Sterilizer (p/n 8045) has been designed to eliminate bad odors in an environmentally friendly, effective and permanent way.

The easy-to-use device produces ozone gas, which oxidises and sterilises odors, bacteria and other organic substances.

The ozone gas quickly reverts to its original form oxygen after the treatment is completed.

No refill of fluids, and no disposables to take care of!

The ozone concentration and the treatment intervals are carefully balanced : only substances causing bad odors are effected.

The ozone will not damage car interiors.
