Product Division CR Car Reconditioning Systems

WPT Slide Hammer Kits

The Glue method has been added to the WPT Dent Repair programme in order to offer a supplement to the existing Tool method. Small dents that cannot be reached from the inside, now can be repaired from the outside without damaging the paint. Both Dent Repair systems match perfectly : The Tool System for all dents that are accessible from the inside and the Glue system for dents that only can be reached from the outside.

The repair method is simple : a Glue Tab is bonded to the centre of the dent with a special glue. With the help of the WPT Slide Hammer the dent can be pulled out in a fluent, controlled way.

The progress of the repair job can be checked similar to the Tool method by watching the reflection lines on the panel from a fluorescent light source.

Partnumber Description

WP6160	WPT Slide Hammer Intro Kit
WP6170	WPT Slide Hammer Standard Kit
WP6180	WPT Slide Hammer Combi Kit
6121	Pack of 5 Glue Sticks, 20 cm, Heavy Duty-Plus
