

# WPT Dent Repair Tool Systems

## Product Division CR Car Reconditioning Systems

### WPT Rota-Grip Tool Sets

The WPT Rota-Grip Dent Repair Tools are fitted with ratcheting handles, which can be locked in 24 different positions.

Simply depress the thumb button on the back of the handle to change the handle position.

No need to remove the tool from the job, a significant time-saving.

With the ratcheting handle you always can select the ergonomically optimal handle position, which prevents muscle problems.

With the variation in tips and tool dimensions the WPT Rota-Grip Tool Sets can be used for a wide range of dent repair jobs, especially on doors.
