

WPT SYSTEMS

Quality tools for:

- **Paintless Dent Removal**
- **traditional body repair jobs**

Quick and efficient dent repairs

Paintless Dent Removal

With the advanced WPT-systems dents can now be repaired quickly and efficiently without respray if the original paint has not been damaged. This new method is suitable for repairing the type of dents caused by car doors, shopping cars, hail storms and car transport. Even dents under the braces and in other places that are hard to reach can be repaired to perfection.

The process

Paintless Dent Removal is basically a process of restoring the bent metal to the shape it had before the dent occurred.

With special tools the metal is gently urged back into its original shape. The reflection of a fluorescent light is used to show the exact location of the tool and guide the repair job.

Traditional body repairs

Though primarily designed for Paintless Dent Removal, the tools of the WPT-system are increasingly used in traditional body repair jobs. Particularly when the damage occurred in places that are hard to reach.

Distinct advantages

The WPT-systems offer a number of distinct advantages. First of all, of course, there are the savings in both time and material while repairing dents without paint damage in new and used cars. Other dents need less

filling and sanding: more direct savings. Apart from this you can generate extra turnover and broaden your customer base; cars with minor damages will be brought in for repair more readily since the customer faces lower repair costs and there is no risk of improper colour matching.

The WPT-system helps you meet the rapidly changing market demands (a.o. from insurance companies).

A WPT-system is also an investment that pays off after just a few repairs!

Day-to-day practice

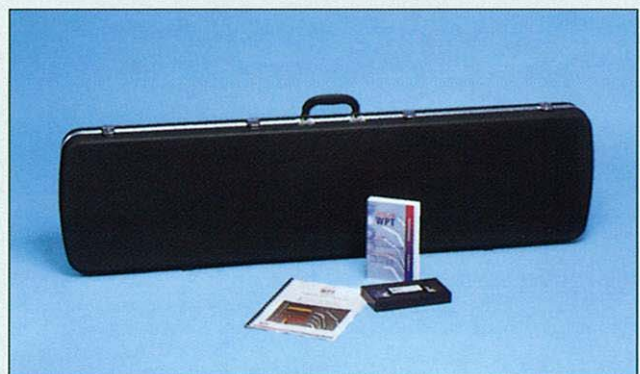

Day-to-day practice is the best proof of the system's quality. We are therefore proud that WPT-systems are used at a rapidly increasing number of body repair shops, car dealer organizations and car manufacturers throughout Europe.

Quality products with a lifetime guarantee

The hand crafted tools offer a perfect combination of strength, flexibility, durability and corrosion resistance. This is the result of the specific composition of the stainless steel and the tailored heat treatment. We back our WPT-tools with a lifetime guarantee. The colour coding of the handles enables you to select the proper tool for the job right away.

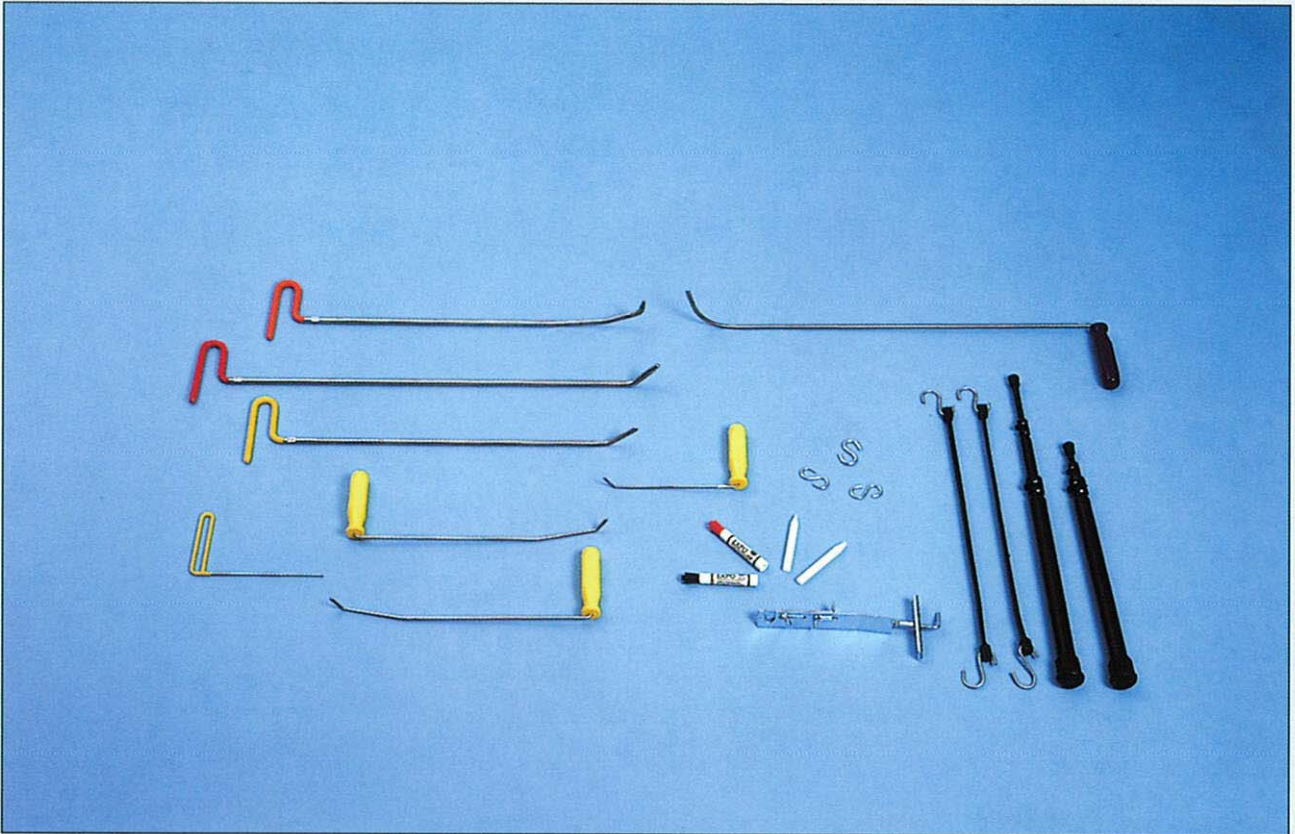

More details?

Should you need additional information, please contact your local dealer. He will be pleased to arrange a demonstration of the WPT-system, so you can convince yourself that perfect results can be obtained.

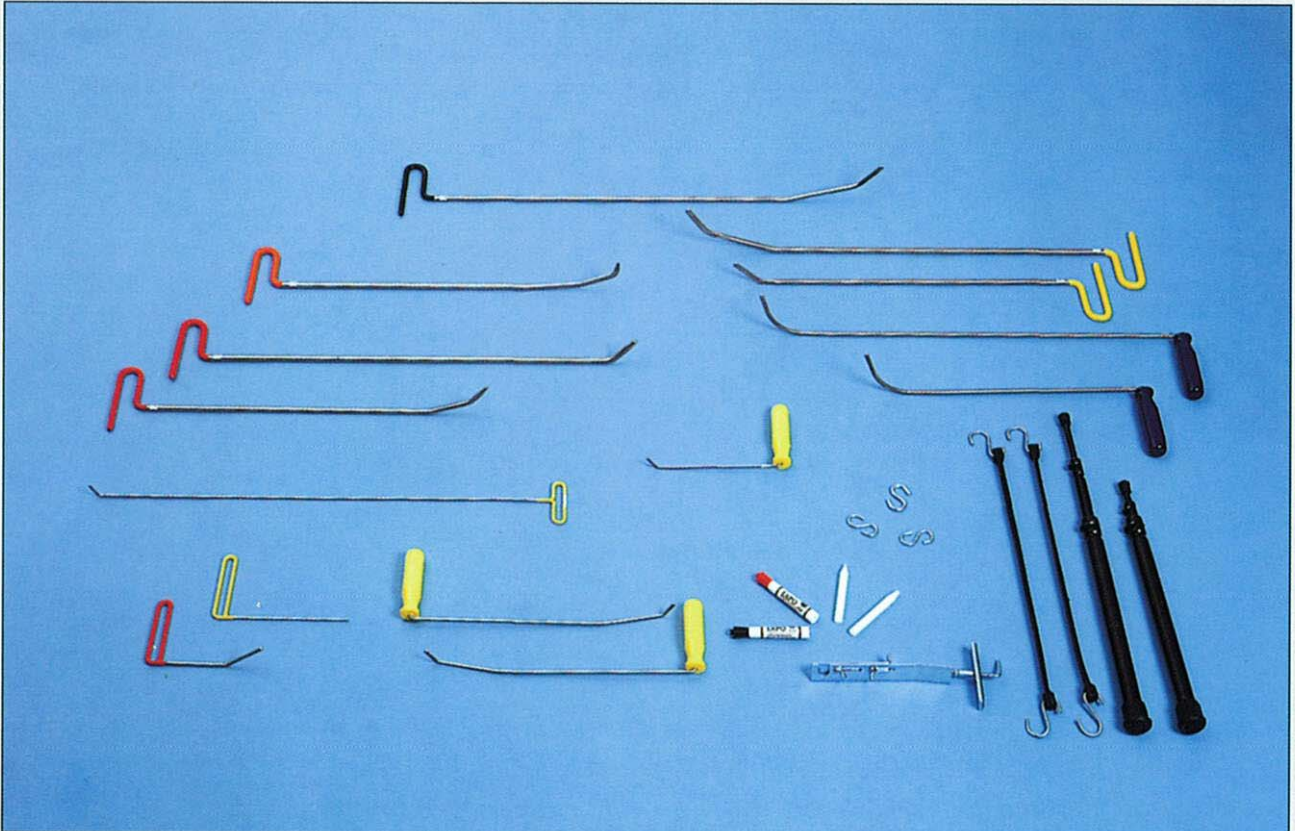

All kits come in a practical carrying case, complete with a manual and an introduction video.
