Product Division CR Car Reconditioning Systems

TwenTec Dent Repair Air Cushion Kits

The TwenTec Kits are based on the brand-new Air Cushion Dent Repair method for quick and efficient repairs of larger dents in places that are difficult to reach.

Up-till-now damaged parts were replaced just because of the limited access for traditional dent repair tools. The new repair method now offers a cost-effective alternative for such repair jobs.

Basically the method is very simple. An inflatable cushion is positioned behind the dent and connected to an air compressor. The pressure can be regulated with a foot pedal.

The dent removal process normally needs to be finished with Paintless Dent Removal (tool repair or glue repair) before the part is resprayed.

The Air Cushion Repair System is available in two configurations : a Starter Kit TW4001 and a comprehensive Standard Kit TW4002.

The Air Cushion method has received the Gold Medal at the Paris EquipAuto Show in 2005 in the category "Innovative Products"
