

TwenTec Dent Repair Glue Systems

Product Division CR Car Reconditioning Systems

TwenTec Dent Hammer Kits

The Glue method has been added to the TwenTec Dent Repair programme in order to offer a supplement to the existing Tool method. Small dents that cannot be reached from the inside, now can be repaired from the outside without damaging the paint. Both Dent Repair systems match perfectly : The Tool system for all dents that are accessible from the inside and the Glue system for small dents that only can be reached from the outside.

The repair method is simple : a Glue Tab is bonded to the center of the dent with a special glue. With the help of the TwenTec Dent Hammer the dent can be pulled out in a fluent, controlled way.

The progress of the repair job can be checked similar to the Tool method by watching the reflection lines on the panel from a fluorescent light source.

Partnumber Description

TW6060 TwenTec Dent Hammer Basic Kit

TW6070 TwenTec Dent Hammer Economy Kit

TW6080 TwenTec Dent Lifter Combi Kit
