

Dent Repair Light Sources

Product Division CR Car Reconditioning Systems

Dent Repair Lights with Suction Cup Base

It is strongly recommended to always use an appropriate fluorescent light at Paintless Dent Repair jobs.

The reflection lines created by such a light around the dent, makes it much easier to determine where exactly the Dent Repair Tool or the Dent Repair Glue Tab should be positioned as well as to monitor the progress of the repair job.

We not only supplies a large Light Stand (p/n 6502) but also offers three smaller lights with a suction cup base.

Both 12 Volt and 220 Volt versions are available.

P/N	Description
6538	Mini-Light, 220 Volt
6535	Stubby Light, 12 Volt
6566	Quik-Lite, 12 Volt
